"I reckon." he sald, "I reckon I'd better put the things in a glass case. They are too good to wear. Half way up, in gold letters, was the Senator's name. The top quarter of the leg was bright red. In front was a gold eagle; on the back was a Democratic rooster in full crow. "From some appreciative constituent." the Senator murmured. "Very kind, I am sure." He didn't put them in a glass case, though, for he is a disciple of fucon's philosophy and believes that things are made for uss. So he put on the "butes" and wors them. ### WOOD PULP.

Portland Woman Claims a New

Mrs. Joshua S. Palmer, of Portland, Me. claims to have discovered a new method of manufacturing wood pulp, by which the expense is reduced at least 20 per cent, and the time of manufacture in the same proportion. The formula has been patented in every country in the world, and a company with 400,000 capital has begun operations in Bangor, Me., says the Lewiston Journal.

describe the surroundings in which that object had been placed, as well as the associations that were connected with it. Mrs. Paimer has possessed her strange attribute for years, and has been a source of exceeding wonder and delight to her friends. Her late husband was much interested in the amazing properties of her mentalities, and was continually experimenting, bringing various objects to her.

One day he gave her a piece of dry wood puip. Did you ever see any? Well, if you were not awage of what the substance was you probably would be wholly unable to determine its nature. Mrs. Palmer had niver seen any puip. She held this piece in her hand a moment and then clearly explained its nature, the process of converting it from wood and the possibilities. She could see the formula used, but her perception went beyond that, even.

A still different process was revealed to her—a process so strongly impressed that, woman though she was, with no inherent knowledge of wood puip, she never lost sight of her discovery. She is somewhat of a chemist, and she at once set on foot some preliminary experiments. The experiments were elaborated and extended and the prospects grew still brighter. The discovery was undoubtedly one of the most important of modern times and Mrs. Palmer was correspondingly impressed. She at once succeeded in interesting business men in the enterprise, and its value is to be thoroughly tested.
